

SKYLAB SERIES PHOTOGRAPH ALBUMS

The photographs, originally stored in three-ring binders, have been transferred to folders; the original order of the photographs has been retained and this order, with subject titles, is indicated by the master index and the master table of contents below. NASA organized the photographs using four levels of description: albums, volumes, books, and sections. This is reflected in the master index and table of contents. Following the master table of contents is a box inventory, which provides information on the particular location of every album / volume / book / section of the photographs in this subseries. Boxes 915-917 contain photographs which are not listed on the master table of contents. They are grouped together in folders that are labeled with subject headings; the folders are filed in alphabetical order.
