

ASTP SERIES
WORKING GROUP DOCUMENTS

Working groups of both Soviet and American personnel discussed, negotiated, and drew up agreements in various areas of responsibility. In joint meetings, they refined technical specifications for compatible systems; both sides, however, worked independently on preliminary designs in the interim. This subseries consists of documents related to the working groups and is divided into three parts: The History Data Files, Working Group Minutes, and Working Group-Related Reports and Reviews. The arrangement of the History Data Files for US/USSR meetings is based on a system developed by Boeing (contracted to manage the ASTP technical documentation) and elaborated on by the JSC History Office. Meeting date dividers are followed by numbered folders. Each number corresponds to the type of documents to be found in that folder. The inventory lists meeting dates for which material has been collected. The researcher is referred to the history file in box 1246 for information on the location of specific documents. Part two consists of working group meeting minutes and working group-generated documents. This section is organized by working group. For each group there is a folder containing minutes, followed immediately by documents produced by that group. Part three consists of working group-related reports and reviews. These are organized chronologically and then alphabetically. Folder titles are listed in the inventory. The period covered by the documents is 1972 through 1975. Documentation in the history data files is concentrated on the 1972-73 period, while the other two sections have more material from the 1974-75 years.
