SKYLAB SERIES

POST APOLLO PLANNING

Post-Apollo planning was carried out by the Apollo Extension System (AES) which was renamed Apollo Applications Program (AAP) in September 1965, and ultimately, in 1970, designated the Skylab Program. This subseries contains documents from a number of sources, both in-house and contractor, regarding planning missions to follow the Apollo Program. Included in this subseries are a number of space station concepts and general files regarding future manned space missions. Boxes 585 - 588 contain a chronological file of these miscellaneous documents. In boxes 589 - 591 are files from the Space Station Study Office at MSC. These consist of correspondence, drawings, and reports on a number of subjects involving future space flight. The material is divided into two sections, one filed alphabetically by subject in its original order and the other filed chronologically. They are dated from 1961 - 1965. Boxes 592 - 595 contain information about AAP and AES, information about the Air Force MOL (Manned Orbital Laboratory) program, and contractor documents on EALM (Boeing's Extended Apollo Laboratory Module Study), LORL (Lockheed's Large Orbital Research Laboratory System). These documents are followed by miscellaneous reports and reading files that are filed chronologically.
