

SKYLAB SERIES MIDTERM REVIEW

The Skylab midterm review and assessment was designed to review the scope of the work planned and its relation to schedules and resources, to ensure that planned resources were sufficient to support the program on the established schedule, and to make management and technical recommendations as required. Established in accordance with the instructions of Dale Myers, Associate Administrator for Manned Space Flight, a review team was formed using both Skylab and non-Skylab business and technical managers. This subseries contains task team reports and reports from the centers and contractors visited. Documents are foldered by site visited and filed chronologically.
