

SKYLAB SERIES

MISSION REQUIREMENTS DOCUMENTS

This subseries is divided into two sections. The first contains Mission Requirements documents for each of the Skylab missions. The purpose of these documents is "to provide the basis for mission planning and design by all elements of the Skylab Program." They are prepared in accordance with NASA Headquarters, Office of Manned Space Flight directives and Skylab specification documents. The second group of materials are requirements documents for selected components of a Skylab mission including recovery operations, data acquisition, testing, hard and software, and ship and aircraft support. Each group of documents has been filed chronologically. They were produced between the years 1967 and 1973 although the bulk of them appeared after 1968.
