

SKYLAB SERIES TRANSCRIPTS

This subseries consists of transcripts from the three manned Skylab missions. Boxes 789-815 contain air-to-ground transcripts consisting of communication between Mission Control and the crew, onboard transcripts consisting of all communications recorded by the command module and airlock module recorders, and a series of unbound transcripts consisting of everything recorded at Mission Control, including statements made by the Public Affairs Office at periods when Skylab was beyond the range of any tracking station. Boxes 816-829 contain unedited Channel B communications, consisting of information recorded on board and sent to the ground at intervals. Transcripts are arranged chronologically by mission. Dates given for bound volumes are according to date of transcription. All others are arranged by mission date. The transcripts have been retained in their original bindings and are not in folders.
