

SKYLAB SERIES SKYLAB REVIEWS

This subseries contains documents relative to a number of Skylab program review processes. There are some short runs of material, however, in many cases, there is no consistent pattern to indicate that meetings were conducted on a regular schedule. Many of these review meetings were held at the directorate level rather than at a center level as in the case of Skylab Management Reviews and Martin Marietta Business Management Reviews. Keep in mind that this subseries contains a large variety of documents that are related only because they are all the products of a program review process. Items are filed by subject and chronologically within each group. The series concludes with a number of miscellaneous review documents. The vast majority of the material was generated between 1968 and 1973.
