

SKYLAB SERIES
HOUSKEEPING TASKS

Planning for long-term living in space involved such problems as waste disposal, prevention of bacterial contamination, and design of a dependable water system. This one-box sub-series preserves some of the discussion and planning for housekeeping tasks involving these areas. Included also are considerations of alternate methods of trash disposal in case of failure of the trash dump airlock, types of containers to use for waste, and activation and deactivation of the Skylab water system.
