

**SKYLAB SERIES  
STOWAGE LISTS**

Several directorates contribute to the compilation of stowage lists that are inventories of equipment stowed in each major component of the Skylab orbiting laboratory. These lists undergo several revisions during program development as new experiments are added or deleted or weight or schedule considerations force changes in on-board equipment. The documents are filed chronologically and were produced between 1970 and 1972. Separate stowage lists for the Airlock Module, Multiple Docking Adaptor, Command Module and Orbital Workshop are included in the series.
